HARMFUL PITCH IN PULP. [1963] [7]p. 3 refs.
Order from SLA $1.10 63-18811

Trans. of Svensk Pappers-tidning, 1963, v. 66, no. 3, p. 51-54.

DESCRIPTORS: *Pitch (Material), Flotation (Separation), *Wood pulp.

A test method was developed, based on the principle of pulp flotation in aqueous medium, which may be used to determine the amoun t of pitch separated from wood fibers. The total amount separated is considered harmful, since it is not known whether the emulsified portion will deposit on parts of the mechanical equipment which are continuously in contact with pulp suspension. Fresh softwood pitch showed an increased tendency to form deposits due to its greater plasticity caused by terpenes
